# Enterprise Keyboard 3.9
## Release Notes – July, 2020

## Highlights

- Now compatible with Zebra devices running Android 10
- Supports key repetition using long-press action
- Macro actions

## Device Support

**Newly supported devices in this release**:

- Zebra devices running Android 10

  (MDNA Enterprise license required for TC21 and TC26)

  See all supported devices

**Device support dropped with this release**:

- Devices running on Android 7.x Nougat (except WT6000)

## New in Enterprise Keyboard 3.9

### Key Repetition Feature

Supports key repetition on long-press action, including keycodes, Unicode characters and upper/lower case letters.

### Macro Actions

Now supports Macros or series of actions to combine multiple keycodes, presses or actions into a single action.

### Zebra MDNA Enterprise Licensing support

Zebra Professional-series devices, including the TC21 and TC26, require purchase of a license to use Enterprise Keyboard. These devices arrive with a non-functional EKB "dummy" client, which must be replaced with the functional EKB v3.9 (or later) client after purchase of the Zebra MDNA Enterprise license. Until then, EKB displays a "license required" prompt whenever an app focuses on a text input box.

**NOTE: New features of EKB 3.9 must be implemented in custom layouts using Enterprise Keyboard Designer 1.9 (or later)**

## Resolved Issues – none
## Known Issues – none

# About Enterprise Keyboard

Enterprise Keyboard is a soft input device designed to provide the most productive means possible of inputting data into Zebra devices. Building on the stock Android keyboard, Enterprise Keyboard provides programmable keys, can switch quickly between fixed and custom layouts, and has the ability to scan barcode data directly into an application using any of the device's scanners.
